

Where Mother Nature is Never Wrong!

Hi, my name is Winston Kao. I am an inventor and researcher. The products and information you will find here are beyond conventional science. They are based on my personal observation of life's processes.

I am a bit of a renegade, in that I don't believe that conventional science is totally true or correct. If it were right, we would not have our existing environmental and nutritional scene.

Most of the environmental and health problems that we experience are the result of conventional science in our daily lives.

□

It is conventional science that has polluted our rivers and oceans so that we are fearful of eating fish because of mercury and PCBs, and other toxic chemicals. We are afraid to eat red meat and chicken because of the way it has been grown: with antibiotics, steroids, hormones, and a diet contrary to its nature.

Chemicals in the form of preservatives and flavor enhancers are in everything we eat.

Our produce is inundated with toxic fertilizers, pesticides, fungicides, and herbicides.

□

With each passing year, we find ourselves growing ever fatter, more tired, sicker, and weaker. The cancer, diabetes, and heart attacks rates are skyrocketing and every where we look we see the products of conventional science - acid rain, polluted air, polluted water, toxic soil, ill health, ...etc. We as
individuals must stop doing the same old things and expecting a different result!

□

Conventional science believes in the killing field. I call it the “see bug, kill bug mentality.”

Conventional science always addresses the symptoms of something and never bothers to investigate the true cause, and then correct it.

Why are cancer, diabetes, and heart disease still incurable?

Because conventional science never investigates the cause nor recognizes any “cures” that cannot be patented and do not increase the revenue of the drug companies and doctors.

“Balance” is seldom used and never part of handling any problem such as disease, fungus and algae infestations, rampant weed problems, or water pollution problems.

□

Welcome To Go Beyond Organic!
